

M.C. Dean Awarded Contract for New Air Force Technical Applications Center

Design-Builds Electrical, Telecommunications, & Security Systems for America's Homeland Security

Dulles, Va., Nov. 18, 2011 – M.C. Dean, Inc., the nation's leading engineering and technology service firm for mission-critical systems and facilities, was recently awarded the design-build contract of all electrical, telecommunications, and security systems for the Air Force Technical Applications Center (AFTAC), headquartered at Patrick Air Force Base, Fla.

AFTAC performs nuclear treaty monitoring and nuclear event detection, providing authorities' quality technical measurements to monitor nuclear treaty compliance and develop advance proliferation monitoring technologies to support America's homeland security.

The 17-acre site will consist of administrative and analytical facilities, constructed in a single phase. The primary office is the command and control headquarters multi-story facility that is approximately 276,000 square feet that includes a highway warehouse and Class 100 Clean Room. The adjacent facility is a Radiochemistry Laboratory that is approximately 38,000 square feet. The project also includes an 18,000-square foot stand-alone Central Utility Plant with UPS systems and emergency generators. A stand-alone parking garage will provide the facility with 600 parking spaces.

Building Infrastructure Modeling (BIM) will be implemented throughout design and construction. The new complex will be built to achieve LEED Silver Certification. Project is on schedule for completion in December 2015.
